Ligaturscheren mit Gezahntem Scherenblatt mit Hartmetalleinlage besonders geeignet zum Schneiden von Ligaturen.
Die Zahnung vermeidet das Verrutschen auf dem Nahtmaterial.

Forbici speciali con lama dentellata in carburo di tungsteno,
particolarmente adatte per tagliare legature.
La dentellatura evita durante l'impiego di scivolare sul materiale da sutura.

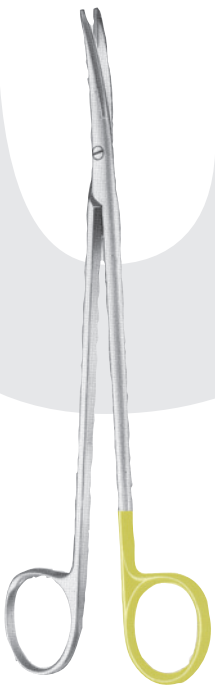

Scissors with tungsten carbide serrated edges,
especially designed for ligature cutting.
A finest serration prevents the slipping on the suture material.

Tijeras especiales con cuchilla dentada de carburo de tungsteno,
particularmente idoneas para cortar las ligaduras.
El dentado evita que resbalgue durante la utilización sobre el material de sutura.

ATRAUMA

DE BAKEY

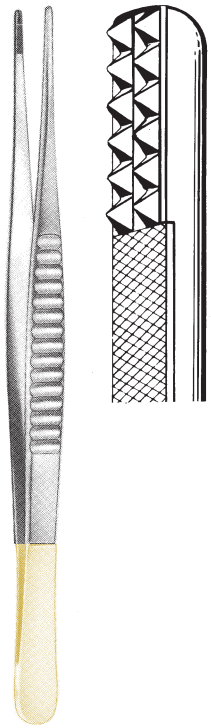

Die Pinzetten und Klemmen mit De Bakey Zahnung gewährleisten hervorragende Ergebnisse, sowohl in der Herz und Gefäßchirurgie aus auch in den Anwendungsbereichen, in welchen besonders atraumatische Operationstechniken wichtig sind.
Die sichere Zahnung garantiert einen optimalen Halt an den Gefäßen, ohne Traumen am Gewebe hervorzurufen.

Le pinze con morso De Bakey assicurano eccellenti risultati, sia nella chirurgia cardiaca e vascolare che nei campi di applicazione dove si richiedano tecniche operative particolarmente atraumatiche.
La presa sicura garantisce un'ottima tenuta sui vasi senza traumatizzare i tessuti.

The De Bakey forceps ensure excellent results in cardio-vascular surgery and in fields where special surgical techniques are required.
The safe grip guarantees an excellent hold on vessels without trauma for tissues.

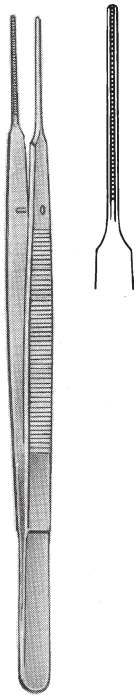

Las pinzas con boca De Bakey proporcionan excelentes resultados, tanto en cirurgía cardiaca como en la vascular y en los sectores de aplicacíon sin traumas.
La sujeción es segura, sin traumatizar los tejidos.

COOLEY

Die Atrauma Klemmen nach Cooley mit sehr feiner Zahnung erlauben den Einsatz in den auf die Herzchirurgie begrenzten Bereichen, insbesondere in der Pädiatrie.
Die sichere Zahnung garantiert einen optimalen Halt an den Gefäßen, ohne Traumen an den Geweben hervorzurufen.

Le pinze atraumatiche Cooley con morso sottilissimo permettono l'uso in campi operativi limitati alla cardiochirurgia, particolarmente in quella infantile.
La presa sicura garantisce un'ottima tenuta dei vasi senza traumatizzare i tessuti.

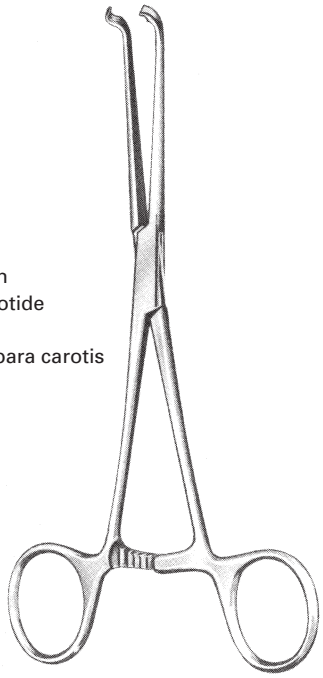

The Cooley forceps with very thin mouth can be used in limited surgical fields especially for children's cardio surgery.
The safe grip guerantees an excellent hold on vessels without trauma for tissues.

Las pinzas sin traumas Cooley con boca muy fina consienten la utilización en sectores quirúrgicos limitados a la cardiocirugía, especialmente para la infantil.
La sujección es segura, sin traumatizar los tejidos.

SOFT GRIP NADELHALTER
PORTAGHI ***SOFT GRIP***
SOFT GRIP NEEDLE HOLDERS
SOFT GRIP PORTA-AGUJAS

Nadelhalter *SOFT GRIP*
Mit der Bezeichnung *SOFT GRIP* identifizieren wir eine Spezialserie von Instrumenten, deren Maulteile eine Hartmetallbeschichtung haben, die durch ein besonderes, physikalisch-chemisches Verfahren erzielt wird. Dieses Verfahren führt zu einer Oberfläche mit speziellen Vorzügen:
• Die sehr dünne Beschichtung beschädigt nicht die Nadel und das Nahtmaterial.
• Die kristalline Oberfläche erzeugt einen "Grip", welcher die Bewegung und Drehung von Nadel und Nathmaterial unterbindet.
• Die hohe Oberflächenhärte verleiht dem Maul des Instrumentes eine deutlich höhere Lebensdauer.
Die instrumente aus der Spezialserie *SOFT GRIP* garantieren dem Chirurgen die perfekte Kontrolle des Instrumentes.

Portaghi serie speciale *SOFT GRIP*
Con la sigla *SOFT GRIP* identifichiamo una serie speciale di strumenti che adotta un rivestimento del morso in carburo di tungsteno, ottenuto tramite particolari procedimenti fisico-chimici.
Questi procedimenti danno origine ad una superficie con particolari peculiarità:
• il rivestmento finissimo non danneggia l'ago e il materiale da sutura;
• la superficie cristallina crea un grip che non permette all'ago e alla sutura di muoversi e di ruotarsi;
• l'elevata durezza superficiale conferisce al morso dello strumento un sensibile aumento della sua vita media.
Gli strumenti della serie speciale *SOFT GRIP* assicurano al chirurgo il perfetto controllo dello strumento elevando così la qualità del suo lavoro.

SOFT GRIP

***SOFT GRIP* special series needle holders**
The acronym identifies a special series of instruments featuring a tungsten carbide coating obtained by means of special physical and chemical procedures.
By means of these procedures, a surface with a number of peculiar features can be obtained:
• a very thin coating which does not damage the needle and the suture material;
• the grip obtained on the crystalline surface prevents needle and suture displacement and rotation;
• high surface hardness allows considerable increase of average lifetime.
The instruments featured in "SOFT GRIP" special series enable the surgeon to obtain perfect instrument control and improved performances.

Porta-agujas especial *SOFT GRIP*
Con la sigla *SOFT GRIP* se identifica una gama especial de intrumentos con boca recubierta de Carburo de Tungsteno se obtiene per medio de especiales procedimientos fisico-químicos.
Mediante estos procedimientos se consigue una superficie bastante peculiar:
• el recubrimiento, muy fino, que no daña la aguja y el material de sutura;
• la superficie cristallina crea un "grip" que no permite que se mueva o gire la aguja y la sutura;
• la elevada dureza de la superficie que proporciona a la boca del instrumento un sensible aumento de su vida media.
Los instrumentos de la gama especial *SOFT GRIP* aseguran al cirujano el perfecto control del instrumento aumentando de esta manera la calidad de su trabajo.

COLCLOUGH

QA 850-00

Die Colclough-Bandscheibenstanze besteht aus einem Griff mit 3 auswechselbaren Aufsätzen mit 4, 5 und 6 mm Maulbreite. Die Aufsätze können rasch und leicht ausgewechselt werden: Durch Lösen der Halteschraube und des Schiebers am Griff. Die Aufsätze sind drehbar und können in jeder Position sicher fixiert werden.

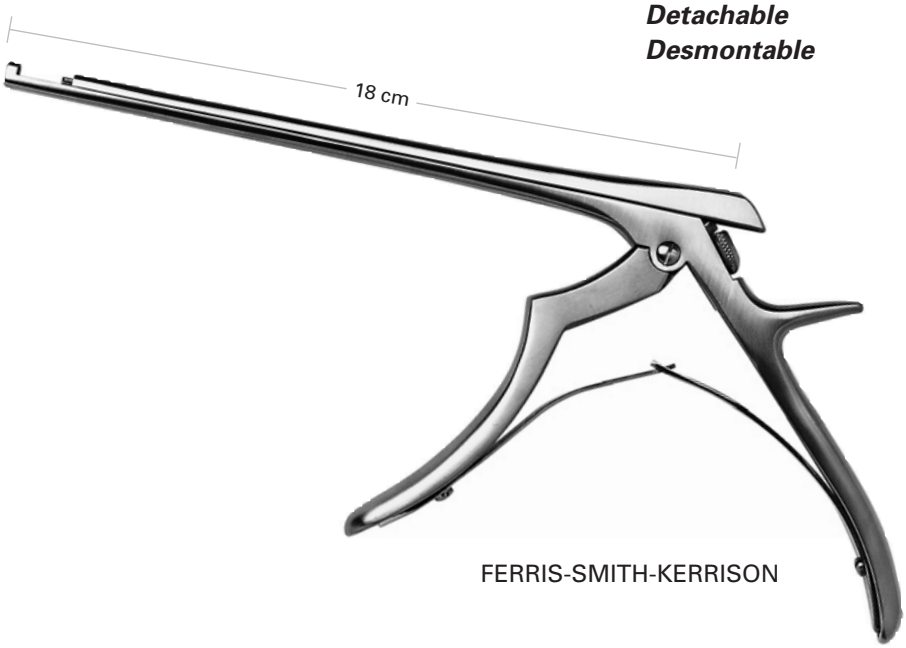

Il laminotomo di Colclough è composto di un manico e di 3 punte intercambiabili con morsi da 4 mm, 5 mm e 6 mm di larghezza. La sostituzione delle punte può essere effettuata in modo facile e rapido allentando la vite e rimuovendo il sistema di fissaggio che si trova sul manico. Le punte sono girevoli e possono essere fissate in qualsiasi posizione desiderata.

The Colclough Intervertebral Disc Forceps consists of a handle and 3 interchangeable tips of 4 mm, 5 mm and 6 mm width of bite. An easy and quick replacement of tips is made possible by simply releasing the fixing screw and pulling up the slide lock. The tips are rotating and can be fixed in any position desired.

El laminotomo según Colclough está compuesto de un mango y de 3 puntas intercambiables con bocas de 4 mm, 5 mm y 6 mm de ancho. Las puntas pueden ser remplazadas de manera fácil y rápida al soltar el tornillo de fijación y al remover el cierre corredizo en el mango. Las puntas son rotatorias y pueden ser fijadas en cualquier posición deseada.

Nadelhalter SOFT GRIP
Mit der Bezeichnung *SOFT GRIP* identifizieren wir eine Spezialserie von Instrumenten, deren Greifer eine Wolframkarbidbeschichtung haben, die durch besondere physikalisch-chemische Verfahren erhalten wird.
Diese Verfahren führen zu einer Oberfläche mit speziellen Vorzügen:
- Die sehr dünne Beschichtung beschädigt nicht die Nadel und das Nahtmaterial.
- Die kristalline Oberfläche erzeugt einen "Grip", welcher die Bewegung und Drehung von Nadel und Nahtmaterial unterbindet.
- Die hohe Oberflächenhärte verleiht dem Greifer des Instruments eine deutlich höhere Lebensdauer.

Die Instrumente aus der Spezialserie *SOFT GRIP* garantieren dem Chirurgen die perfekte Kontrolle des Instruments und heben so die Qualität seiner Arbeit an.

Portaghi e pinze serie speciale SOFT GRIP
Con la sigla *SOFT GRIP* identifichiamo una serie speciale di strumenti che adotta un rivestimento del morso in carburo di tungsteno, ottenuto tramite particolari procedimenti fisico-chimici.
Questi procedimenti danno origine ad una superficie con particolari peculiarità:
- il rivestimento finissimo non danneggia l'ago e il materiale da sutura;
- la superficie cristallina crea un "grip" che non permette all'ago e alla sutura di muoversi e di ruotarsi;
- l'elevata durezza superficiale conferisce al morso dello strumento un sensibile aumento della sua vita media.

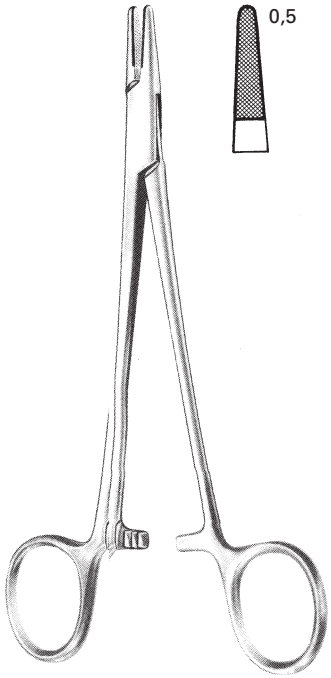

Gli strumenti della serie speciale *SOFT GRIP* assicurano al chirurgo il perfetto controllo dello strumento elevando così la qualità del suo lavoro.

SOFT GRIP special series needle holders and clamps
The acronym *SOFT GRIP* identifies a special series of instruments featuring a tungsten carbide coating obtained by means of special physical and chemical procedures.
By means of these procedures, a surface with a number of peculiar features can be obtained:
- a very thin coating which does not damage the needle and the suture material;
- the grip obtained on the crystalline surface prevents needle and suture displacement and rotation;
- high surface hardness allows considerable increase of average lifetime.

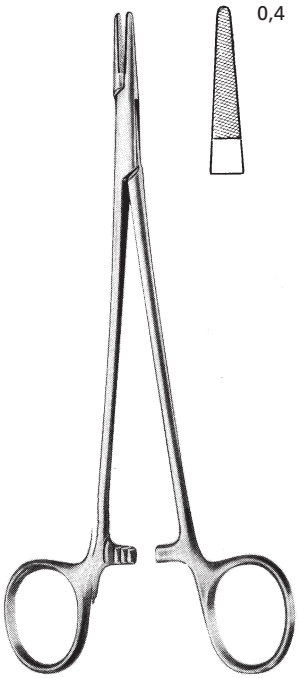

The instruments featured in *SOFT GRIP* special series enable the surgeon to obtain perfect instrument control and improved performances.

Porta-agujas y pinzas especial SOFT GRIP
Con la sigla *SOFT GRIP* se identifica una gama especial de instrumentos con boca recubierta en Carburo de Tungsteno.
El recubrimiento se obtiene por medio de especiales procedimientos fisíco-químicos.
Mediante estos procedimientos se consigue una superficie bastante peculiar:
- el recubrimiento, muy fino, que no daña la aguja y el material de sutura;
- la superficie cristalina crea un "grip" que no permite que se mueva o gire la aguja y la sutura;
- la elevada dureza de la superficie que proporciona a la boca del instrumento un sensible aumento de su vida media.

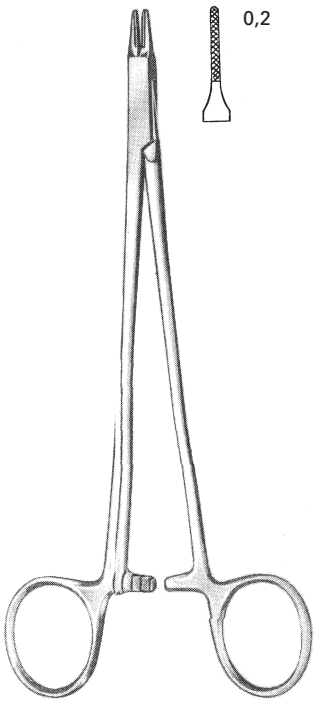

Los instrumentos de la gama especial *SOFT GRIP* aseguran al cirujano el perfecto control del instrumento aumentando de esta manera la calidad de su trabajo.

SOFT GRIP

Nadelhalter SOFT GRIP
Mit der Bezeichnung *SOFT GRIP* identifizieren wir eine Spezialserie von Instrumenten, deren Greifer eine Wolframkarbidbeschichtung haben, die durch besondere physikalisch-chemische Verfahren erhalten wird.
Diese Verfahren führen zu einer Oberfläche mit speziellen Vorzügen:
- Die sehr dünne Beschichtung beschädigt nicht die Nadel und das Nahtmaterial.
- Die kristalline Oberfläche erzeugt einen "Grip", welcher die Bewegung und Drehung von Nadel und Nahtmaterial unterbindet.
- Die hohe Oberflächenhärte verleiht dem Greifer des Instruments eine deutlich höhere Lebensdauer.

Die Instrumente aus der Spezialserie *SOFT GRIP* garantieren dem Chirurgen die perfekte Kontrolle des Instruments und heben so die Qualität seiner Arbeit an.

Portaghi serie speciale SOFT GRIP
Con la sigla *SOFT GRIP* identifichiamo una serie speciale di strumenti che adotta un rivestimento del morso in carburo di tungsteno, ottenuto tramite particolari procedimenti fisico-chimici.
Questi procedimenti danno origine ad una superficie con particolari peculiarità:
- il rivestimento finissimo non danneggia l'ago e il materiale da sutura;
- la superficie cristallina crea un "grip" che non permette all'ago e alla sutura di muoversi e di ruotarsi;
- l'elevata durezza superficiale conferisce al morso dello strumento un sensibile aumento della sua vita media.

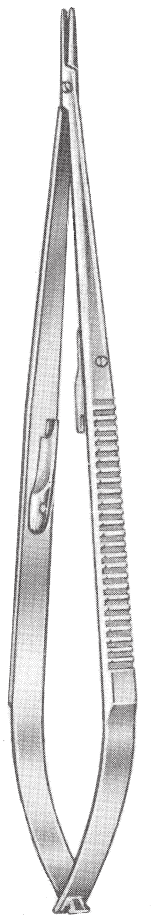

Gli strumenti della serie speciale *SOFT GRIP* assicurano al chirurgo il perfetto controllo dello strumento elevando così la qualità del suo lavoro.

SOFT GRIP special series needle holders
The acronym *SOFT GRIP* identifies a special series of instruments featuring a tungsten carbide coating obtained by means of special physical and chemical procedures.
By means of these procedures, a surface with a number of peculiar features can be obtained:
- a very thin coating which does not damage the needle and the suture material;
- the grip obtained on the crystalline surface prevents needle and suture displacement and rotation;
- high surface hardness allows considerable increase of average lifetime.

The instruments featured in *SOFT GRIP* special series enable the surgeon to obtain perfect instrument control and improved performances.

Porta-agujas especial SOFT GRIP
Con la sigla *SOFT GRIP* se identifica una gama especial de intrumentos con boca recubierta de Carburo de Tungsteno. El recubrimiento se obtiene per medio de especiales procedimientos fisico-químicos.
Mediante estos procedimientos se consigue una superficie bastante peculiar:
- el recubrimiento, muy fino, que no daña la aguja y el material de sutura;
- la superficie cristallina crea un "grip" que no permite que se mueva o gire la aguja y la sutura;
- la elevada dureza de la superficie que proporciona a la boca del instrumento un sensible aumento de su vida media.

Los instrumentos de la gama especial *SOFT GRIP* aseguran al cirujano el perfecto control del instrumento aumentando de esta manera la calidad de su trabajo.
